Cheap TFT 2.2 Inch Display on Arduino (ILI9340C or ILI9341): I ordered a 240 x 320 pixel 2.2 inch TFT LCD display off of ebay for £3.86 which is dirt cheap compared to similar displays from some of the western companies. The only problem was that there wasn't a guide to how to get it working! When I figured i...

320x240 pixels in 18 bit color with a microSD breakout. There are two ways to wire up these displays: Software SPI is a more flexible method (you can use any pins on the Arduino) and hardware SPI is much faster (4-8x faster) but you are required to use the hardware SPI pins.. Since the display is quite large, we found that drawing would seem really slow if using 'software' SPI.
