Birdoswald was the eleventh fort from the east end of Hadrian's wall. The 1987-92 excavations reported here in great detail explored a long and complex stratified sequence dating from the 2nd century AD. Work concentrated on buildings either side of the via principalis , but also included investigation of the northern defences and the eastern wall at the porta quintana dextra . The report discusses the pre-Roman environment, the construction of the stone fort, discussing the evidence in different periods, the Roman ceramics, the small finds, animal bones and medieval and modern periods. Quite a clear occupation history emerges, from the clearing of the woods in the early 120s AD to the abandonment of the site c.520 AD and the text is copiously illustrated.
