Some may think sketching is a disappearing skill, but if you ever enter a design studio, you will find out differently. Studios still make sketches and drawings by hand and in most cases, quite a lot of them. They are an integral part of the decision-making process, used in the early stages of design, in brainstorming sessions, in the phase of research and concept exploration, and in

day-to-day work routinely involves them observing people, asking questions, searching for information, making and testing ideas, and ultimately generating 'solutions' to 'problems'. Manifest in the design process is the act of research. Huge technological advances in information, computing, and manufacturing processes also offer enormous opportunities to product designers such as the development of "intelligent" products and services, but at the same time raise important research questions that need to be dealt with. Product designers are, in many ways,
