The measured data are used to describe a model where each layer refers to a given material.

Lorentz Dispersion Model - Horiba

The classical dispersion model is based on the sum of the single and double Lorentz, and Drude oscillators. Lorentz dispersion model The Lorentz classical theory (1878) is based on the classical theory of interaction between light and matter and is used to describe frequency dependent polarization due to bound charge.

Theoretical model Jellison and Modine developed this model (1996) using the Tauc joint density of states and the Lorentz oscillator. The complex dielectric function is : Here the imaginary part  $\epsilon_2$ ,  $\epsilon_1$  of the dielectric function is given by the product of imaginary part of Tauc's (1966) dielectric  $\epsilon_2$ ,  $\epsilon_1$  function with Lorentz one  $\epsilon_1$ ,  $\epsilon_2$ .

Note that the technical notes «Classical dispersion model» and «Lorentz dispersion model» are complementary to this one. Theoretical model Drude's model (1900) is based on the kinetic theory of electrons in a metal which assumes that the material has motionless positive ions and a non-interacting electron gas. This simple model uses classical mechanical theory of free electron. It was ...
