Workshop on Creating Social  
Semantic Web 2.0 Information Spaces  
and the Workshop on Wireless Sensor  
Networks. Two hundred participants  
registered for the main conference  
from 24 countries and 43 papers were  
presented; the two workshops had  
overwhelming support and over 400

Artificial intelligence (AI) programs  
represent knowledge in a fashion  
similar to human knowledge and the  
activities of an AI system are closer to  
human behavior than that of traditional  
systems. Thus, AI enables the

computer to act more like a human instead of making the human think and act more like a computer. This capability combined with applying human factors concepts to the interface can greatly improve the human-computer interface. This paper provides an intro duction to artificial

intelligence and then proposes a number of methods for using AI to improve the human-machine interaction. AN INTRODUCTION TO ARTIFICIAL INTELLIGENCE

Definition There are many definitions of artificial intelligence (AI) running from the very general to the very

detailed. Perhaps the most well accepted general definition is that by Elaine Rich: "Artificial intelligence is the study of how to make computers do things at which, at the moment, people are better", (Rich, 1983). A good example of a detailed definition is provided by the Brattle Research

Corporation; "In simplified terms, artificial intelligence works with pattern matching methods which attempt to describe objects, events or processes in terms of their qualitative features and logical and computational relationships," (Mishkoff, 1985).
