As with all cars, there are common problems with the Mazda 6, and in this article we look at some of the most likely issues to trouble owners of this well known vehicle. Diesel Particulate Filter. The diesel particulate filter or DPF removes harmful particles from the exhaust fumes when the car is running. The Mazda 6 needs to be allowed to warm up and reach top levels of performance for this part to function properly.

Common Issues with the Mazda 6—BreakerLink Blog

Advice for buyers What should I look for in a used Mazda 6 estate? The older 2.0-litre diesel engine can suffer with lubrication problems, where fuel finds its way into the oil system. Keep an eye...

Used Mazda 6 Review—2007-2012 Reliability, Common Problems

My 2014 mazda 6 2.2d 175ps is pretty much worthless with only 30k on the clock, this despite a full mazda service history and additional oil and filter changes every 4k miles.. problems occur with leaking injector seals letting blow by gasses contaminate your oil, this tars the entire lube system up, which usually kills your turbo, just before killing the rest of the lump!

Dead Mazda 2.2L Diesel: Don't let this happen to you...

Mazda 2.2 SkyActiv-D Engine Review. The 2.2 SkyActiv-D (the SH-VPTR and SH-VPTS) is the 2.2-liter turbo-diesel engine that is based on its predecessor - the MZR-CD. The main difference is that the new engine has a reduced compression ratio. It dropped from 16.3 to 14, and this number is pretty low for diesel engine and almost the same as ...

I have owned a 2014 Mazda 6 auto Tourer now for nearly a year and travelled over 20k in this time. I have had a couple of issues. Firstly, prior to a scheduled service at around 38k, I had an oil warning light flash up regarding the oil pressure. The advice being to stop driving and contact Mazda Service. The issue turned out to be contaminated oil, which was resolved under the manufacturer's ...

Mazda 6 problems | Ask Honest John | Honest John

Can oil level rising cause problems? Yes, engine oil diluted with diesel is a poor lubricant, premature engine wear will occur and engine life will be reduced. Furthermore, if the oil level was to rise too high oil seals can be damaged and in the worst case scenario oil could be drawn into the intake system which would lead to total engine loss if this wasn't caught early.
