This is an excellent reference and teaching book on SOHO networking. It includes clear instructions and guidance and is recommended reading for HND Computer Science students. As a teacher of this subject I find that it covers most of (but not all) of the requirements of most introductory HE networking units.

Amazon.com - Customer reviews: SOHO Networking - A Guide to

The most defining characteristic of a Soho network is that it's a small network. It's a small network. Generally 9-59 users are found on the Soho network. It's a rule of thumb. It could be a little bit outside that range. The primary purpose of a Soho network is to enable Internet access which means access to remote resources and also means access to local resources. Or do I mean by that. Well this network is very simple.

SOHO Networking gives you all the help you need to build your network fast - and make the most of it Step by step, you'll learn how to choose between wired and wireless networks, set up and secure your network, share your resources and Web connections, build a networked home entertainment system - even use your network as a low-cost phone system

SOHO Networking - A Guide to Installing a - book by Pete

Use routers that support the latest standard version of Wi-Fi (currently, 802.11ac).If your network includes, or will include in the near future, more than one client that connects through 5 GHz Wi-Fi, use a tri-band Wi-Fi router.; Determine whether your home network should have a single router only, whether you should use a two-router setup, or whether you need a mesh network system.

How to Build and Maintain the Best Home Network

A SOHO (Small Office Home Office) router is the product of the merging of several originally distinct network hardware devices into a single device. The switch, access point and DHCP server are useful to build a local network, while the router part is only needed to connect the local network to other networks.

1-3 - Networking Basics - Bioinformatics - Web Development

A key SOHO LAN use is to share high-speed Internet access among all network PCs or hosts. High-speed Internet access is provided through cable modems, digital subscriber line (DSL) modems, and other connections. A SOHO network connected to a router permits all connected PCs to share high-speed Internet access.
