Elmers Engines Steam Engine Plans - John-Tom
The engine works by using heat from a candle to evaporate water, which creates steam to form jets that propel the engine. To start, cut the bottom off of a soda can and place a tea light in it. Then, slide the copper tubing through 2 holes in the can, place it in a bowl of water, and bend the ends so they are

Baylis ...

Occasionally when starting a compound engine there can be dead spots at the top and bottom of the small piston's travel because at the outset it is the only one supplied with steam. Once the engine is running there are no dead spots. During each revolution expanded exhaust steam from the small cylinder is being supplied to the large cylinder.
