students and junior doctors really need to know in order to understand the implications of prescribing one drug over, or in combination with, another. The text provides current information on all areas of drug prescribing with updated discussion and guidance on such topics as adverse drug reactions, 'personalized medicine', gene and cell-based therapy, advances in cancer therapy, and mechanisms of drug action and treatment guidelines in HIV and mycobacterial infections therapy. A new chapter on alternative medicines and nutraceuticals has been introduced and Further Reading lists have been updated to include key medical websites. All medical students and junior doctors who read this book will learn not only how to use drugs safely and effectively, but,

This new edition has been fully revised to bring pharmacologists and trainees fully up to date with the latest developments in the field of medical pharmacology. Beginning with an introduction to general pharmacological principles, the following sections discuss drugs for common and less common disorders found in different regions of the body. The seventh edition includes new drugs, as well as the latest therapeutic guidelines from authoritative sources such as the World Health Organisation (WHO) and the British National Formulary (BNF). Each topic includes key point summary boxes as well as illustrations, flowcharts and tables to

students and clinicians with a unique insight into why drugs have their therapeutic effects, by presenting the basic principles of pharmacology as they affect the patient. An understanding of these principles is essential for rational, safe, effective, and economical prescribing. The text shows how knowledge of the scientific basis of drug action is applied in a clinical context to devise the most effective treatments for disease and to maximize the therapeutic effects of the drugs being used. This new edition includes an appraisal of the value of evidence-based medicine and a greater discussion of issues in genetics. There are specialist contributors for areas of infectious disease, gastrointestinal disorders, blood disorders, general anaesthesia, cancer chemotherapy,

and immunosuppression. The revision also includes updates to both the pharmacopoeia and the drug therapy section, to reflect new developments in both available drugs and in their use.

This book covers all the pharmacology you need, from basic science pharmacology and pathophysiology, through to clinical pharmacology to therapeutics, in line with the integrated approach of new medical curricula. The first section covers the basic principles, and the rest is organised by body systems. The book ends with sections on toxicity and prescribing practice. Integrates basic science pharmacology, clinical pharmacology and therapeutics Brief review of pathophysiology of major diseases
