Most psychologists now agree that differences in personality can largely be accounted for by variation in the 'Big Five' personality dimensions of neuroticism vs. stability, extraversion vs. introversion, agreeableness vs. antagonism, conscientiousness vs. lack of self-discipline, and openness to experience vs. rigidity.

Understanding personality disorder | The Psychologist

Tripartite Theory of Personality Freud (1923) saw the personality structured into three parts (i.e., tripartite), the id, ego, and superego (also known as the psyche), all developing at different stages in our lives. These are systems, not parts of the brain, or in any way physical. The id is the primitive and instinctive component of personality.

The Psychologists Book of Personality Tests - Wattpad

Personal construct psychology (PCP) is a theory of personality developed by the American psychologist George Kelly in the 1950s. Kelly's fundamental view of personality was that people are like naive scientists who see the world through a particular lens, based on their uniquely organized systems of construction, which they use to anticipate events.
